
Lehrbuch Der Molekularen Zellbiologie Alberts Pdf Download

Übung Biologie I/A: Zellbiologie
(Studienziel Bachelor, Lehramt für Gymnasien und Gesamtschulen)

Wichtige Allgemeine Hinweise

1. Zu den Übungen Biologie I/A bitte unbedingt mitbringen:

- Kursprogramm, das Sie gerade lesen
- Präparierbesteck bestehend aus: 2 Präpariernadeln, 2 spitzen Pinzetten, davon 1 Uhrmacherpinzette, 1 dünnen Wasserfarbpinsel, 1 Plastikpipette, frischen, zweiseitigen Rasierklingen, etwas Filterpapier, Objektträgern (1 Packung mit 50 Stück), Deckgläsern 18 x 18 mm (ca. 200 Stück)
- Zeichenmaterial bestehend aus: weißem Zeichenpapier, Bleistiften mittlerer Härte, z. B. HB (zu harte Bleistifte drücken durch, zu weiche ergeben ein verschmiertes Bild), Bleistiftspitzer, Radiergummi, Protokollheft
- Taschenrechner, Uhr mit Sekundenzeiger

2. Voraussetzungen für eine erfolgreiche Teilnahme an der studienbegleitenden Fachprüfung:

Anwesenheit (maximal einmal Fehlen mit Attest), Mitarbeit (theoretische Vorbereitung, Protokoll)

3. Termine für die studienbegleitende Fachprüfung und Nachprüfungen

21.02.09, 12 – 14 Uhr	studienbegleitende Fachprüfung: Hörsäle I-III Physik, Kurt-Alder Hörsaal und Hörsaal II Chemie
02.04.09, 12 – 14 Uhr	1. Nachprüfung: Hörsäle I-III Physik
30.07.09, 12 – 14 Uhr	2. Nachprüfung: Großer Hörsaal Biologie, Weyertal

4. Literatur zum Praktikum:

- a) B. Alberts et al. (2001), Lehrbuch der Molekularen Zellbiologie. 2. korr. Aufl., Wiley-VCH („der kleine Alberts“)
- b) N. A. Campbell (2006), Biologie, 6. Auflage, Spektrum
- c) Kurze Übersichten zu den Methoden der Zellbiologie (z. B. Licht- und Elektronenmikroskopie) in Lehrbüchern der Zellbiologie, etwa
H. Kleinig, U. Maier (1999), Zellbiologie, G. Fischer, pp. 504-511
H. Lodish et al. (2005), Molekulare Zellbiologie, 4. Aufl. Spektrum, pp. 154-172

Background ===== Major depression is one of the most common mental health problems in childhood and adolescence, with an estimated prevalence of 3.2% to 7.2%. Symptoms of depression are often associated with multiple risk factors such as low socioeconomic status and poor psychosocial support. Objective ===== To analyze the association of maternal psychiatric disorders with the onset of major depressive disorder (MDD) in a birth cohort. Methods ===== From a total of 4,169,188 live births born between January 1st, 1993 and December 31st, 2000 in Piedade, São Paulo, Brazil, 860 children were enrolled at birth and were assessed until the age of 18 years, when mothers filled out the Children's Depression Rating Scale. The mothers also answered a question on whether a psychiatrist had previously diagnosed them with depression, which was considered as a proxy for maternal depression. Children's Depression Rating Scale scores were analyzed to identify cases of MDD and the prevalence of MDD in each sex and socio-economic status (SES) category was calculated. In a case-control study, each case was matched with two controls by sex and SES, and maternal depression was compared between the cases and the matched controls. Multivariate analysis with conditional logistic regression was used to adjust for variables that had a significant association with MDD. Results Among the 860 participants, 12 children had MDD (11 females) during the follow-up. The prevalence of MDD was 0.96% (95%CI 0.47-1.44%), ranging from 0.01% in the low SES category to 4.59% in the high SES category. The prevalence of MDD was significantly higher in children whose mothers were previously diagnosed with depression (1.30%) than in children with no maternal depression (0.29%). The adjusted OR for MDD in children with maternal depression was 5.2 (95%CI 1.2-23.0) and remained significant after adjusting for sex and SES. Conclusion A previous diagnosis of maternal depression, in a birth cohort with low SES, is strongly associated with the onset of MDD in children. .js">
